

ROOHAN KHAN

Data Engineer — Python, SQL, ETL Pipelines, PostgreSQL

Karachi, Pakistan | +92 315 2759433 | roohank8@gmail.com | linkedin.com/in/roohan-khan8 | github.com/roohankhan8 | portfolio-roohan.netlify.app

PROFILE

Backend and data engineer with a Computational Finance background, building Python and SQL data pipelines that ingest, validate, normalize and reconcile data in production. Experience with relational data modeling, query optimization on high-volume workloads, asynchronous job processing (Celery/Redis), and API and third-party integrations including payment webhooks. Works directly with product, mobile and frontend teams and owns features from requirements through production.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript/TypeScript, PHP

Data Engineering: ETL pipelines, data ingestion, validation & normalization, data modeling, reconciliation workflows, audit trails, pandas, Celery/Redis task queues

Databases: PostgreSQL, MySQL, MongoDB, Firebase; relational schema design, query optimization, constraints

Backend & Integrations: Django, Django REST Framework, Laravel, REST API design, third-party and payment/webhook integrations, role-based access control

Analytics & Modeling: scikit-learn, statsmodels, feature engineering, statistical modeling

Tools: Git/GitHub, Docker, CI/CD exposure, code review, agile collaboration

EXPERIENCE

Associate Software Engineer – Backend | K-Labs

Feb 2026 – Present

- Own features end to end, from requirements gathering with product, mobile and frontend teams through to production, building data-backed APIs and relational data models.
- Built Laravel backends and REST APIs that integrate payments, third-party services and webhooks, with explicit state transitions that keep order and payment records consistent.
- Built admin panels and content workflows (Laravel Nova, Filament, Statamic) giving non-technical teams controlled access to data.

Backend Developer (Part-time) | Digital Marketing

Jun 2025 – Jul 2026

- Optimized SQL access on high-volume screens, reducing unnecessary production queries.
- Migrated a legacy PHP portal into a modular Laravel architecture while preserving production behavior.
- Built file and submission workflows with review and approval queues and role-based access for 5 user roles.

Backend Developer | NED Scholars Logbook (Django)

2023 – 2024

- Designed relational data models in Django for structured logs, categories and versioning of research records, with authentication and role-based access.

PROJECTS

Transaction Reconciliation Platform | Python, Django, DRF, PostgreSQL, Celery/Redis

github.com/roohankhan8/ubl

- Built an import pipeline that validates and normalizes transaction files, then reconciles them in tracked runs (pending, processing, completed, failed).
- Protected financial data integrity with Decimal-based money handling, database constraints, a service-layer design and an append-only audit trail.

KSE-30 Quantitative Research Pipeline | Python, pandas, scikit-learn, statsmodels

- Built an end-to-end Python data pipeline covering ingestion, cleaning, feature engineering and modeling.

Multi-Vendor Ecommerce Platform, Bahrain | Laravel, REST APIs (K-Labs client, confidential)

- Modeled vendor catalogs, carts, checkout and orders; implemented payment checkout with webhook verification and explicit order states (pending, paid, failed, refunded).

EDUCATION & CERTIFICATIONS

BS, Computational Finance – NED University of Engineering & Technology, Karachi

2022 – 2026 | GPA 3.2

Associate AI Engineer for Developers – DataCamp (2026) | Python – DataCamp | SQL – Kaggle

Languages: English (Fluent)
