PROFILE

Computational Finance graduate with a Python and SQL toolkit and hands-on data pipeline work: ingestion, cleaning, validation, feature engineering and modeling. Experienced with relational databases, query optimization on high-volume production data, and building import and reconciliation workflows that protect data integrity. DataCamp-certified in AI engineering for developers, with Kaggle SQL and DataCamp Python certifications.

TECHNICAL SKILLS

Languages: Python, SQL, PHP, JavaScript

Data & Analysis: pandas, scikit-learn, statsmodels, data cleaning & validation, feature engineering, statistical modeling, data pipelines (Celery/Redis)

Databases: PostgreSQL, MySQL, MongoDB, Firebase, relational data modeling, query optimization

Foundations: Mathematics, Finance, Statistics (BS Computational Finance)

Tools: Git/GitHub, REST APIs, Docker (basic)

EXPERIENCE

Associate Software Engineer – Backend | K-Labs Feb 2026 – Present

- Build and maintain data-backed web products and APIs, working with frontend, mobile and product teams on data models and API behavior.
- Built admin panels and content workflows that give non-technical teams controlled access to data.

Backend Developer (Part-time) | Digital Marketing 30 Jun 2025 – Jul 2026

- Optimized SQL access on high-volume screens, reducing unnecessary production queries.
- Built file and submission workflows with review and approval queues, backed by role-based access for 5 user roles.
- Migrated a legacy PHP portal into a modular Laravel architecture while preserving production behavior.

Backend Developer | NED Scholars Logbook (Django) 2023 – 2024

- Designed relational data models in Django supporting structured logs, categories and versioning for research records.

PROJECTS

KSE-30 Quantitative Research Pipeline (Python, pandas, scikit-learn, statsmodels)

- Built a full Python data pipeline covering ingestion, cleaning, feature engineering and modeling.

Transaction Reconciliation Platform (Python, Django, PostgreSQL, pandas, Celery/Redis) |

github.com/roohankhan8/ubl

- Built an import pipeline that validates and normalizes transaction files, then reconciles them in tracked runs (pending, processing, completed, failed).
- Protected financial data integrity with Decimal-based money handling, database constraints and an append-only audit trail.

Multi-Vendor Ecommerce Platform, Bahrain (Laravel, relational data) | K-Labs client project, confidential, in development

- Model vendor catalogs, carts, checkout and orders with explicit status transitions (pending, paid, failed, refunded) so order and payment records stay consistent.

Service-Booking Platform, customer app + vendor app (Laravel, relational data) | K-Labs client project, confidential

- Kept one booking lifecycle and its business rules consistent across customer, vendor and admin applications.

EDUCATION & CERTIFICATIONS

BS, Computational Finance – NED University of Engineering & Technology, Karachi | 2022 – 2026 | GPA 3.2

Associate AI Engineer for Developers – DataCamp (2026) | Python – DataCamp | SQL – Kaggle | Web Development – SoloLearn

Languages: English (Fluent)
